Diagram illustrating the geometry of the four-point bending test setup. The diagram shows a horizontal beam with two supports (labeled 327 and 328) and two load points (labeled 336 and 338). The distance between the supports is 10.00. The distance between the load points is 8.77. The distance from the left support to the left load point is 0.45. The distance from the right support to the right load point is 0.48.
